

PROFITABLE Lawn Maintenance Starts With SCHEDULING

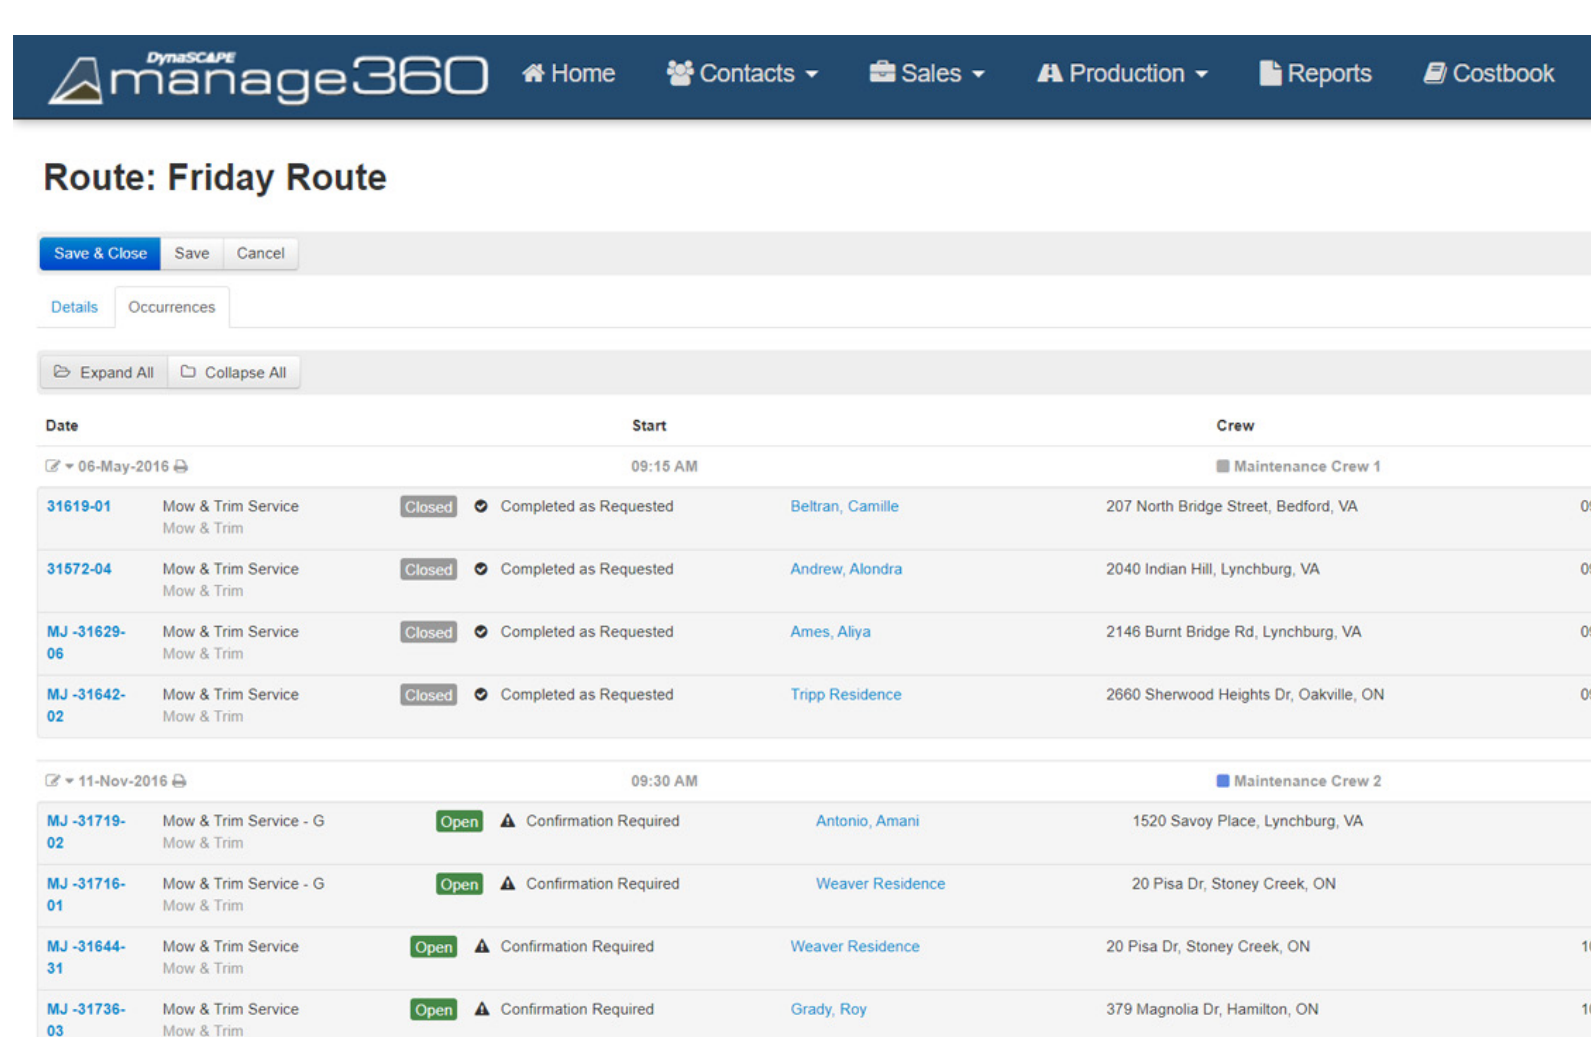

For landscaping businesses that perform regular lawn maintenance, DynaScape's Manage360 can have you scheduling crews in a more organized and optimized way, making your lawn maintenance operation more profitable.

Gain visibility into all your schedule jobs

Never miss a customer by having complete visibility into all your upcoming jobs. See the next day, week, and month of lawn maintenance and snow removal so you can plan the perfect schedule.

Build the perfect route to be more efficient

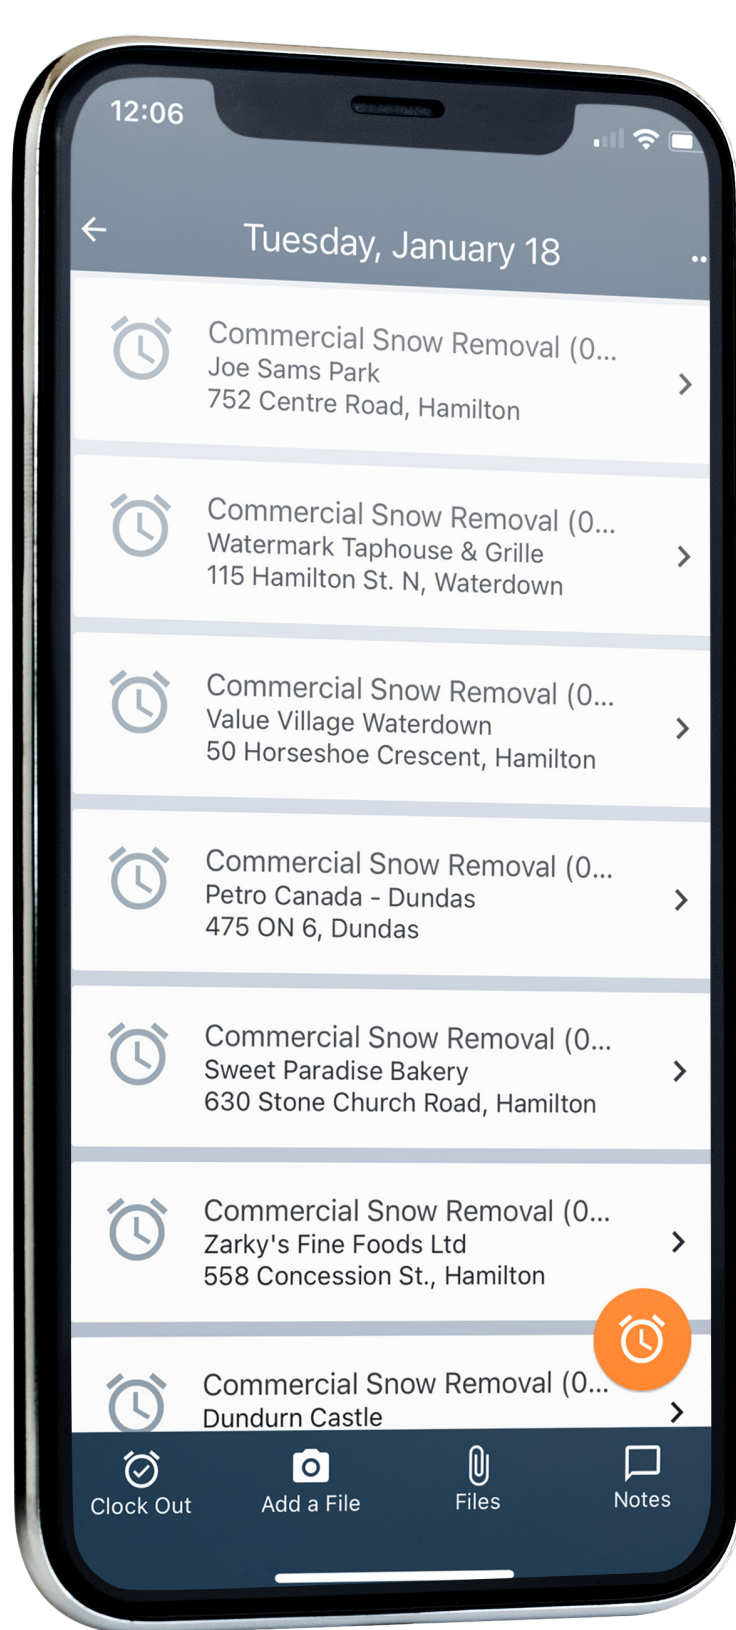

Create optimized routes for your crews to take that reduce the drive time between jobs. Keep your crews working more and driving less by aiming for high route density, and then the shortest drives between jobs.

The only mobile app you need to track your crews

Eliminate paper timesheets and track time accurately for each crew member with DynaScape's crew tracking mobile app.

- Clock in and out of each job
- View accurate material and equipment tracking
- Make crew adjustments on the fly
- See crew positions with GEO stamping
- Work with Online/Offline capabilities

The cost of UNPLANNED delays and driving

Studies found **2.62%** of all driving time is wasted over the year on delays. For a four man crew in one truck, that's over **208 hours** a year.

\$3,120

*Per crew, per year

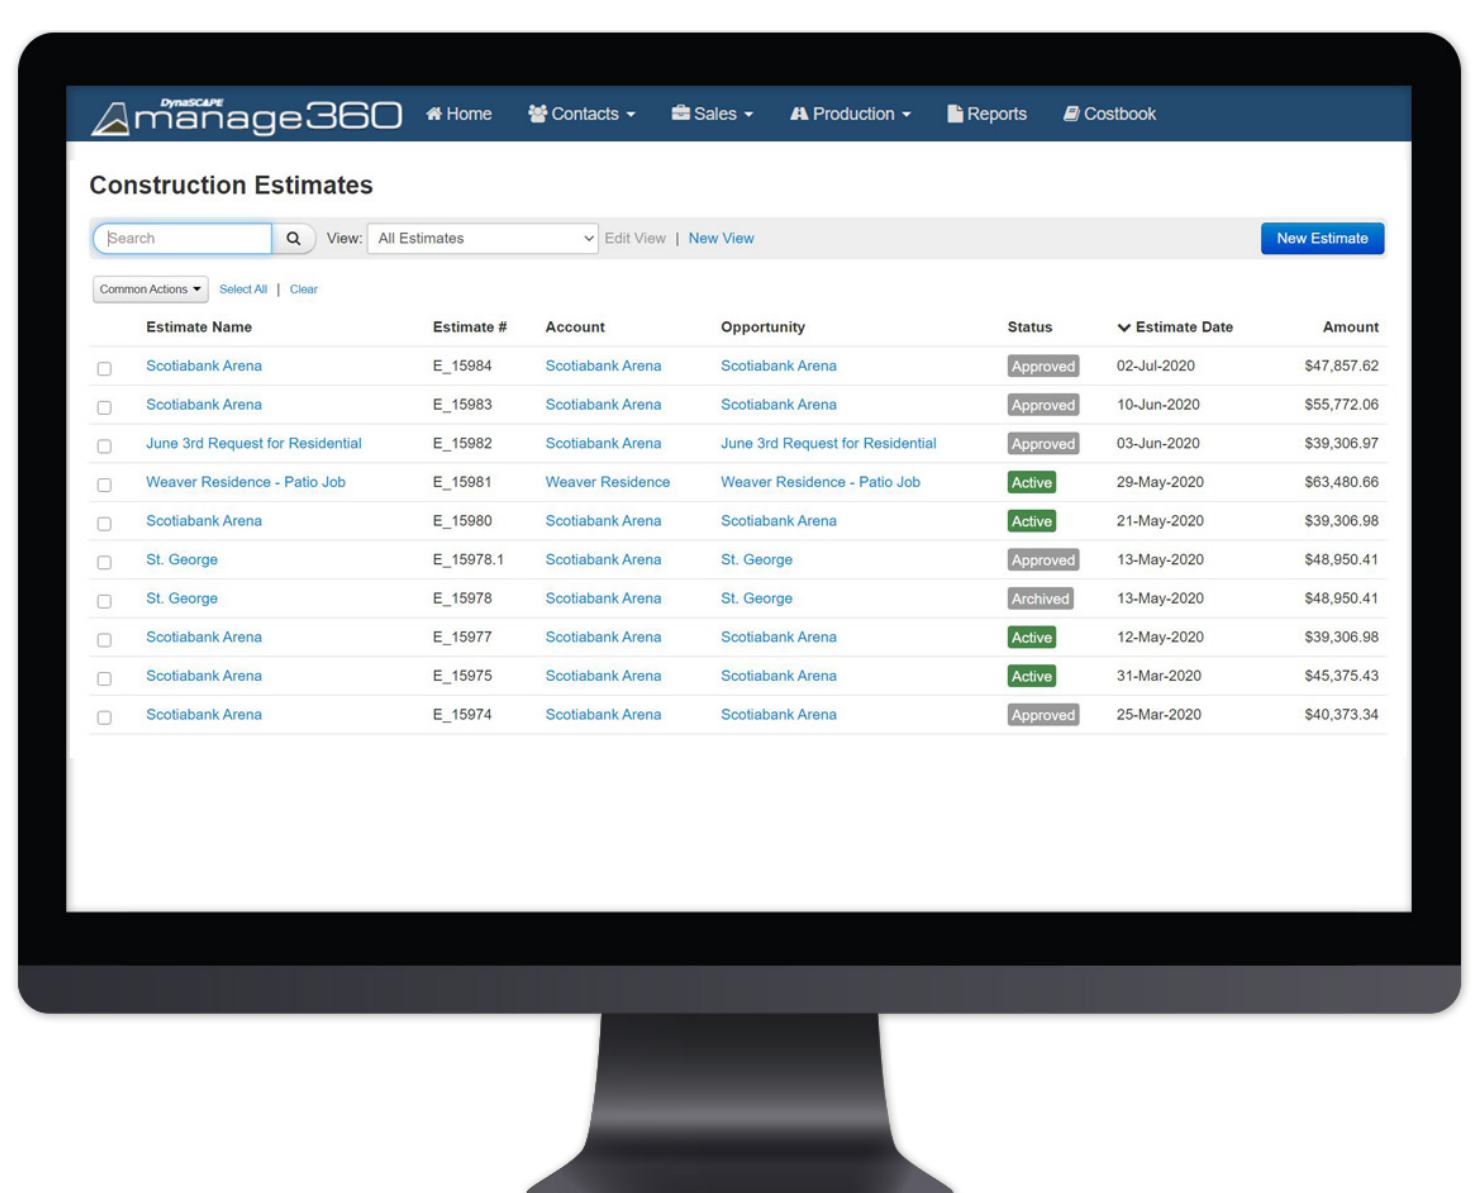

“The sooner you implement it [Manage360], the more profitable you're going to be as you grow. The earlier on you can do it, the better it's going to make your company long-term.”

— Jarod Hynson
Earth, Turf, and Wood Inc.

Scale your landscape business with DynaScape's design and business management software

Streamline your entire landscape design and business process with one complete solution. DynaScape's Manage360 will have you running the most efficient and profitable business, allowing you to plan for future growth and scale your business.
